ABOUT

I'm an engineer who moved into business and finance, and then into blockchain. I have a master's in structural engineering and I'm finishing a master's in business at Católica Lisbon. I build on several blockchains, and I write research too: my paper on spotting financial stress early was accepted at IFABS 2026, a conference hosted by the Bank of England and the FCA. Right now I'm building Tnega, a tool that shows what a tokenized stock really costs to buy.

PROJECTS

Tnega: what a tokenized stock really costs to buy

Founder · 2026 · tnega.app

- tnega.app shows what it costs to buy a tokenized stock or ETF on each chain, fees included. When something can't be measured, it says so instead of showing a made-up number.
- It has a free MCP server (mcp.tnega.app) with no account or key. An AI assistant can use it to compare costs, check a wallet's holdings, and prepare a buy or sell. You sign in your own wallet, and Tnega never holds your money or keys.
- I wrote an escrow contract and deployed it on four chains: BNB Chain, Ethereum, Arbitrum and Robinhood Chain. It passed 33 hostile test cases on a copy of the real network, and a code scan found nothing serious.
- I also measure how markets behave. For example, one trader address had every one of its 153,727 post-only orders refused in a single market, while the typical trader sees about 0.15%.

F2F Cross-Border: sending money across borders without wallets

Led the design · UZH Summer School and ETHGlobal Lisbon · Jul 2026 · f2f-uzh.vercel.app

- Won a partner prize at ETHGlobal Lisbon 2026 (Autonomous On-Chain Automation Platform).
- Transfers go through licensed exchange partners, and every compliance and routing decision is recorded on a public ledger that anyone can check.
- A transfer only completes when both partners sign, so neither side can finish it alone.

TrustCycle: recommendation letters for academia

2026 · trustcycle.tech

- A decentralised way to issue and check academic recommendation letters. Ranked 22 of 66 at the first European Web3 hackathon by MasterZ and IOTA.

EDUCATION AND PROGRAMMES

Google for Startups Immersion EMEA

Powered by Antler · Accepted · Oct 2026

Solana Fall School

Online · Oct 2026 (in progress)

- Learning to build programs on Solana with Anchor.

MSc in Business

Católica Lisbon School of Business and Economics, Portugal · 2023 to Sep 2026

- Courses in business statistics, financial decisions, derivatives and maths for business.
- Thesis: a way to verify identities without trusting one single authority. I tested it with a 5,000-round simulation in Python.

Deep Dive into Blockchain

University of Zurich International Summer School · Online · Jul 2026

- Full scholarship of 1,000 CHF from industry partners. Covered the technology, economics and law of blockchain. I led the F2F Cross-Border project.

MSc in Civil Engineering, Structural Engineering

Kharazmi University · Sep 2018 to Feb 2021

- GPA 15.75 out of 20 (programme average 14.95). Top grade of 18 in finite element methods.

BSc in Civil Engineering

Azad University · Sep 2012 to Dec 2016 · GPA 15.84 out of 20

RESEARCH

Financial Damage Detection Index

Sole author · Oct 2025 to Jan 2026

- Engineers find hidden damage in buildings by watching how stiff a structure is. I used the same idea on company finances to catch stress before big price moves.
- Accepted at the IFABS 2026 London Conference (review score 7.4 out of 10), and awarded an IFABS Grant for Young Researchers.

WORK EXPERIENCE

Generalist expert, AI output evaluation

Mercor, remote · 2026

- Reviewing AI answers for quality and writing down why.

Graduate engineering trainee

Aghigh Naghshe-e-Jahan Holding · 2018, three months

- Estimated quantities and costs for reinforced concrete buildings.

CERTIFICATIONS

- Hedera Business Foundation and Hedera Certified Foundation, The Hashgraph Association, 2026
- Hashgraph Developer Course, 2026

SKILLS

- **Code:** Python, JavaScript and Node.js, Solidity, React, Foundry, MCP servers. Learning Anchor (Solana).
- **Blockchains:** Hedera, BNB Chain, Ethereum, Arbitrum, plus Move contracts on SUI and IOTA.
- **Numbers:** risk modelling (DCC-GARCH), statistics, simulation, market data analysis.
- **How I work:** I design the system and use AI to build it, then check the result myself to make sure it does what it claims.
- **Engineering:** AutoCAD, ETABS, SAFE and ABAQUS from my earlier work.
